TIDAL PRODUCT REGISTRY™

The Tidal Platform empowers organizations to go from understanding threats to identifying defensive capabilities, giving them enhanced confidence in their overall cybersecurity posture.

The Tidal Product Registry™ shows users what they already have, additional solutions they could enable in their security stack, or what other solutions exist that they could add to defend against specific adversary behaviors. Included in the Registry are both capabilities, which describe how a product mitigates, protects, detects, responds, or tests MITRE ATT&CK® techniques, as well as product data sources, which describe the data that products generate as mapped to ATT&CK Data Components. The Product Registry is the key to helping analysts answer important questions about how their organizations are defended against specific threats.

WHY PARTICIPATE IN THE REGISTRY?

Broaden awareness of your products' ability to defend

Highlight your specific area of expertise

Gain exposure to users seeking your unique defensive capabilities

Empower your customers to reap the most value from your products

TIDAL CYBER
THREAT-INFORMED DEFENSE
tidalcyber.com

The Tidal Product Registry includes any mitigation, protection, detection, response, or test that addresses adversary behaviors as described by ATT&CK. The Tidal team will work with you as you submit your capabilities and data sources. While we expect most capabilities to be posted in the Public Registry, we also offer a Private Registry for sensitive items with shared customers.

The Tidal Product Registry is free to join! At Tidal, we want to empower our users and your prospective customers with the knowledge they need to defend themselves most effectively.

Are you unclear on how your product maps to ATT&CK? That's ok! Tidal's experts have been working with ATT&CK since its inception and stand ready to provide you with the support you need to map your solutions, accurately and confidently, to the ATT&CK knowledge base.

ABOUT TIDAL CYBER:

Founded in January 2022 by a team of threat intelligence veterans with experience at MITRE, Department of Homeland Security, and a wide range of innovative security providers, Tidal Cyber enables businesses to implement a threat-informed defense more easily and efficiently. The Tidal Platform helps our customers map the security capabilities of their unique environment against the industry's most complete knowledgebase of adversary tactics and techniques including the MITRE ATT&CK® knowledge base, additional open-source threat intelligence sources, and a Tidal-curated registry of security product capabilities mapped to specific adversary techniques. The result is actionable insight to track and improve their defensive coverage, gaps, and overlaps. For more information, please visit: www.tidalcyber.com.
