

TIDAL CYBER ENTERPRISE EDITION

Are Your Defenses Good Enough?

Adversaries and their tactics, techniques, and procedures change almost daily. Your security teams are working at least double-time to keep up with the different intelligence and detections needed to stave off attacks. You have great security tools in your tech stack but you can't know until faced with an attack if they are doing their job.

What if you could operationalize Threat-Informed Defense and constantly check your defensive stack against MITRE ATT&CK maps, curated threat intelligence, and other defensive and CTI data to help you appropriately tune what you already have to protect you?

FOCUS ON RELEVANT THREATS

Not every cyber threat is important to your organization. With Tidal Cyber's threat profile builder, it's easy to identify the threats that are relevant to your organization, and you can build separate profiles for different business units, locations, or products. It's easy to get started with our targeted profiles based on industry verticals, and our robust knowledge base of adversary intelligence provides clear insights and a deep understanding of the ways adversaries may attack you.

Tidal Cyber continually enhances the MITRE ATT&CK® knowledge base with additional threat information, and makes connections to other resources, including the Sigma analytic repository and vendor solutions in the Tidal Vendor Registry™. You can extend all of these with your own internal knowledge base to fully leverage your threat intelligence, security solutions, and custom developed capabilities.

KEY BENEFITS

Easily track threats relevant to specific business units, locations, or products

Learn exactly how existing security solutions defend against specific threats

Daily recommendations for defensive actions

Quantified view of overall cyber posture with Tidal Confidence Score

Measure actual security, not just security effort

THREAT - INFORMED DEFENSE

MITRE ATT&CK® is a registered trademark of the MITRE corporation

ACCELERATE DEFENSIVE ACTION

Tidal Cyber provides daily alerts of any changes in your defensive capabilities or the techniques used by adversaries in your threat profiles. Recommendations for defensive actions give your team a prioritized to-do list to protect your business against an ever-evolving threat landscape.

OPTIMIZE YOUR SECURITY STACK

With the Tidal Cyber Product Registry, Tidal Cyber provides unprecedented transparency into how your security solutions defend against specific adversary techniques. Combined with your threat profiles, this generates a coverage map that shows where you have gaps or redundancies in your defenses, empowering you to know the exact return on investment of your defenses and how to improve.

GAIN CONFIDENCE IN YOUR CYBER COVERAGE

The Tidal Cyber Confidence Score™ analyzes your threat profiles and defensive stack to quantify how confident you can be in your organization's cyber posture. Dashboards show score fluctuations over time and make it easy to report on security performance, rather than effort.

ABOUT TIDAL CYBER:

Founded in January 2022 by a team of threat intelligence veterans with experience at MITRE, Department of Homeland Security, and a wide range of innovative security providers, Tidal Cyber enables businesses to implement a threat-informed defense more easily and efficiently. The Tidal Platform helps our customers map the security capabilities of their unique environment against the industry's most complete knowledgebase of adversary tactics and techniques including the MITRE ATT&CK® knowledge base, additional open-source threat intelligence sources, and a Tidal-curated registry of security product capabilities mapped to specific adversary techniques. The result is actionable insight to track and improve their defensive coverage, gaps, and overlaps. For more information, please visit: www.tidalcyber.com.
